

Industry Growth and Security Drive DataBank IMX Expansion in the Northeast

Outsourced Conversion Services and Software Spark Business Process Improvements with Rapid ROI

September 12, 2006 (Canton, MA) DataBank IMX, a national business process outsourcing firm, has announced a major expansion and facility improvement at their Boston, MA facility that accommodates customers in New England and Upstate New York. The company has recently expanded from 15,000 to 20,000 square feet of sales and production as they consolidated their Syracuse, NY operations into the Canton, MA facility

The major expansion project includes a 3,000 square foot fire-rated security vault that protects customer documents while in their possession. Documents are stored in this secure area when they are not on the production floor where they are prepared for the scanning that converts paper into digital images for use in our client's document management solutions.

DataBank IMX provides business process outsourcing services, including workflow and web-based hosting of customer information, that result in significant improvements to paper-based systems. The company specializes in the healthcare, government, and higher education markets and complements this expertise with a host of back-office solutions for accounts payable/receivables, human resources, procurement, and financial departments that are burdened with increased compliance and government regulation issues.

New reporting requirements driven by Sarbanes-Oxley, HIPAA, and other compliance guidelines have forced companies to review their internal document management practices and develop business process improvements as they adopt more sophisticated and secure document imaging programs. .

Dick Aschman, CEO, said, "Our Company is rapidly becoming an industry leader with a defined focus on improving the way our customers handle images and information in their business operations. The expansion of our Canton, MA facility is one more step in enhancing our operations nationally. Our understanding of paper, microfilm and digital imaging systems provide a unique advantage in the solutions we provide to a wide range of clients, whether we convert their documents on-site or at one of our ten sophisticated conversion centers strategically located throughout the United States."

"We have equipped our centers with the latest hardware and software that enables us to handle any conversion requirement a customer may have for paper, microfilm or electronic information. Our experienced production management team converts millions of documents per month as we meet the changing demands of our customers for accurate information solutions and the ability to process information easily, quickly, and securely at a departmental or enterprise level."

DataBank IMX is a client – driven organization and a leading provider of content management services and solutions. Our extensive experience and expertise in managing a company's most valuable assets – their documents – is unsurpassed in the industry.

We are dedicated to enabling our clients to become more efficient and effective. Our solutions are deployable at both the departmental and enterprise level. As a result, thousands of clients have chosen DataBank IMX to help manage their image and information needs, streamline their operations, reduce cost, and enhance information access.
