Kent County, Michigan Wins “Best of Michigan” Technology Award

DataBank IMX integrates Hyland’s OnBase and Datacap’s Taskmaster to PeopleSoft to deliver results leading to Kent County’s award for the “Best Application Serving a Public Organization’s Business Needs”

BELTSVILLE– June 13 , 2007 –DataBank IMX, a provider of digital, imaging and conversion services today announced that its customer, Kent County, has received the Michigan Technology Award for the "Best Application Serving A Public Organization's Business Needs" for its Accounts Payable process solution. DataBank IMX leveraged its partnership with Hyland Software and Datacap to deliver this award-winning solution.

Awarded by Governor Jennifer M. Granholm, the County was recognized for "exceptional contributions in the field of Information Technology." By implementing automated capture and workflow in their Fiscal Services department performance has been improved. In addition to reducing paper handling and processing, which equals approximately 4,200 man hours per year, Kent County will also be saving taxpayers \$366,000 over three years.

"As government continues to look for ways to improve services to citizens while improving efficiency, the boundaries between local, state and federal government are merging," said Teri Takai, Director of the Michigan Department of Information Technology. "More and more, we see collaboration and the crossing of boundaries, as government entities are sharing solutions and working together. Businesses and citizens will reap the rewards of shared government solutions as these boundaries become shared."

Stephen W. Duarte, Deputy Director of Fiscal Services for Kent County summed it up commenting, "Kent County, as with most government entities, operates like a profitable business, looking for return on investment to our taxpayers for everything we do. We take great pride in our partnership with DataBank IMX who assisted us in leveraging tight times as an opportunity to re-think our business and discover new efficiencies, ultimately saving taxpayer dollars. We are excited about this award, but more excited about our ability to expand our investment and find new ways to deliver measurable results."

"Kent County's forward-thinking efforts make them leaders among other governmental entities in Michigan. Applying these technology initiatives enables Kent County to better deliver business processes and service while allowing for a more efficient and effective use of tax payer dollars," stated Mike Bilardo, director of Government Solutions at Hyland Software.

The Best of Michigan Technology Award Program was established to showcase excellence among IT professionals in Michigan's state and local governments. All government organizations in Michigan are invited to submit nominations. An Evaluation Committee, consisting of technology professionals from state and local government, selected award winners on the basis of leadership, innovation, collaboration and project excellence.

About DataBank IMX

DataBank IMX is a national full service provider of Imaging and Information Solutions. They deliver services, technologies, tools and methods to capture, manage, store, preserve, and deliver information for clients.
