

Accent colors

Tasteful hints of color

Our accent color palette is made up of five distinct colors. These shades are meant to be used in conjunction with the primary colors to add depth and contrast to our design elements. These colors should be used as accents and should never be the main focus of a design. Accent colors should make up, at most, 10% of the design and should mostly be used in icons, graphics, and supplemental visuals. Accent colors are NEVER used for typography. Accent colors are NEVER used for background elements.

Contrast note: WCAG 2.0 level AA requires a contrast ratio of at least 4.5:1 for normal text and 3:1 for large text. WCAG 2.1 requires a contrast ratio of at least 3:1 for graphics and user interface components (such as form input borders). WCAG Level AAA requires a contrast ratio of at least 7:1 for normal text and 4.5:1 for large text.
